

ABSTRACT

A printer 1 includes a sheet storage unit 6 in which a stack of sheets can be set, a pickup roller 12 which contacts one side of the stack of sheets set in the sheet storage unit 6, and a lid 10 which covers the other side of the stack of sheets. In this structure, each sheet 7 is conveyed toward a print mechanism unit 14 by the revolution of the pickup roller 12. The printer 1 is provided with first ribs 10a and a second rib 3a which forcibly curl the sheets 7 set in the sheet storage unit 6 in the sheet width direction.
